

“ Our eLearning offering goes far beyond providing independent modules for specific training purposes in RDC. We provide flexible, multilingual content, which can be easily optimized by customers to add their own logos, company workflow specific details and texts stored in an external XML file. This feature rich, SCORM 2000 compliant, eLearning content is embedded in a special OLS Launch portal eliminating the need for an external, costly Learning management system. We don't just offer generic, affordable eLearning content; we offer a complete suite of flexible tools enabling RDC site deployment and OLS user training in a controllable and regulatory compliant manner.”

Torsten Adam, Managing Director, pharmaSOL

psiLearn

Why eLearning?

Working in a regulated environment brings unique learning requirements:

- Users need to be adequately trained before they are granted access to production clinical systems.
- Training records need to be maintained
- Users must demonstrate competency
- The target audience may be geographically widely distributed
- Training is required on an ad-hoc basis for new users

eLearning addresses all these requirements and provides a platform to deliver consistent, high quality training material to a geographically dispersed audience, to track the completion of the materials and to provide assessments of the users competency.

What is psiLearn?

psiLearn is a Web Based Training (WBT) experience for Oracle Life Sciences applications. Users learn by watching and listening to engaging and informative content. These include demonstrations, animations, hands-on exercises and assessments.

The eLearning content has been defined by OLS application experts and has been transformed into a professional learning experience by media specialists. A collaboration that has involved over a year of development.

Training can be delivered through the optional OLS launch portal where progress is tracked and access to applications can be disabled until all mandatory training has been successfully completed.

Our eLearning modules support multiple languages and can be easily enhanced with additional languages and features.

By default, we provide language support for English, French, German, Spanish and Hindi.

Why psiLearn?

There is no more efficient, compliant and cost effective alternative to eLearning for RDC site training. Even internal user training can be tracked and optimized with our suite of custom developed eLearning tools tailored for the Life Sciences industry.

psiLearn has been developed with the needs of small and medium sized businesses in mind, but providing the features and functionalities for large scale deployments.

It includes the option of a simple elearning platform integrated into a application launch portal, thus removing the need to buy, install and maintain a separate and potentially expensive 3rd party learning management system (LMS).

Cost efficient

The development of tailored eLearning content is a very complex, time consuming and therefore costly process. Standard eLearning content, however, typically fails to comply with company specific learning needs. Changes are difficult to implement since texts, sounds and graphics are usually hard coded in eLearning solutions.

psiLearn addresses this dilemma between cost effectiveness and flexibility. The content for each of the modules has been designed to be as generic as possible. However, the course contents are configurable to include customer specific graphics, urls, and text.

If required, further customization is available from our dedicated team of elearning and Oracle Life Sciences professionals, providing a unique combination of skills.

Unlimited Possibilities for Limited Budgets

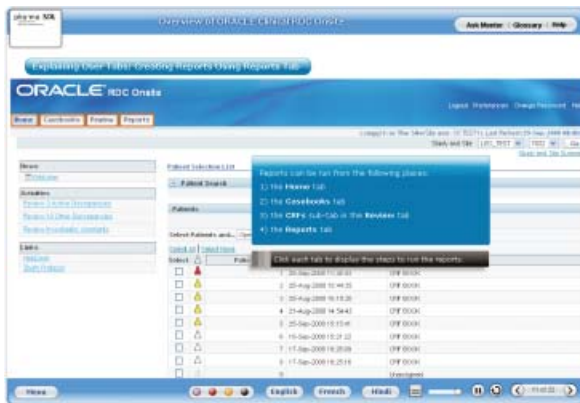

psiLearn

A comprehensive eLearning solution

A comprehensive, complete and flexible eLearning solution enabling efficient and regulatory compliant site training.

Includes all tools and features required to quickly deploy RDC eLearning out of the box. Also available as hosted solution.

Provided with multilingual support delivering a feature rich, engaging learning experience with effective and regulatory compliant learning assessment.

Key facts at a glance:

- Deployed via dedicated learning platform or incorporated into any AICC or SCORM compliant Learning Management System.
- On-line assesment of competency
- Deployable as „out-of-the-box“ the solution
- Supports multiple languages.
Languages currently supported:
English, French, German, Spanish, Hindi.
- Allows flexible incorporation of company details like logos, urls, extra pages by storing non-graphic content in external XML files.

Why pharmaSOL?

Since 1999, pharmaSOL has been helping major pharma companies all around the world to streamline their internal and external business processes, implement and customize their OLS (Oracle Clinical, TMS, RDC, AERS) software.

Each of our employees has more than 10 years of experience with Oracles Life Science Suite and is a proven industry expert.

Experience

- Only provider of an Oracle Accelerate approved rapid implementation approach for Oracles life Science Suite
- Service provider to the Life Science industry for more than 8 years
- Experienced consultants, ex-Oracle consultants
- A proven track record of more than 100 successful projects

Service oriented, project focused

- We understand the needs of our customers
- We get them up and running quickly
- We help them to maintain a validated and efficient system

A broad range of value added services to ensure the lowest total cost of ownership

- Hosting facilities
- Support contracts
- eLearning solutions
- experts contracting
- Applications
 - psiLearn – a complete eLearning suite tailored for OLS
 - psiLab – normalized lab support in OC
 - suppsi.com – a flexible support ticketing system
 - psiDict – a generic TMS dictionary updater
 - psiScan – an Oracle Clinical Workflow and Scan enhancement enabling split screen data entry
 - psiComply – well tested Oracle Life Sciences Validation Suite based on GAMP 5.
