

Why pharmaSOL?

pharmaSOL is a leading provider of innovative technology solutions and expert consulting services for the life sciences industry. Providing high quality capabilities to our pharmaceutical, biotechnology, CROs and regulatory partners for over 10 years, we are committed to delivering efficient and practical end-to-end solutions that allow our clients to focus more successfully on their core business needs.

Representative of that philosophy is our proprietary rapidLIVE solution (for both hosted and onsite installations) that allows clients to cost-effectively implement leading commercial life science systems, including Oracle's Health Sciences suite, in a fraction of the time – enabling them to be in production much sooner.

Our Proprietary rapidLIVE System Implementation Approach

- A ready-to-use, pre-configured and validated solution
- Available for leading commercial life science systems
- With low fixed-cost pricing, go-live in less than 2 months
- Flexible licensing options
- Onsite, hosted or SaaS (including Conversion option)

System Outsourcing Opportunities

- Software as a Service
- Secure and state-of-the-art hosting facilities
- Cost effective licensing, including for Oracle's Health Sciences application suite
- Business process outsourcing, including study set-up and custom development

Service Oriented, Client Focused

- Service provider to the life sciences industry for over 10 years
- Proven track record of 200+ successful projects
- All-encompassing capabilities including training, consulting and validation services
- A strong comprehension of customer needs, concerns and priorities

Why pharmaSOL? (cont'd)

Innovative & Practical Tools to Optimize Business Processes

- **psiLearn** – Complete eLearning suite with learning assessment and tracking
- **psiReports** – Fully integrated EDC reporting dashboard
- **psiUploads** – Secure file management for study and subject documents
- **psiGuidelines** – Secure management for study related documents
- **psiMessages** – Email alerts from your EDC solution
- **psiEAR** – Account request and management system
- **psiSCAN** – CRF scanning solution facilitating data entry
- **supPSI** – EDC site support system
- **psiLINK** – Efficient and seamless integration between life science applications
- **psiXchange** – File exchange in a highly secure and controlled manner

rapidLIVE

Accelerated implementation
of leading commercial
Life Sciences systems

Why rapidLIVE?

Implementation projects for enterprise software packages are typically considered to be costly and time-consuming...

Not Anymore!

Typical approach

- Complex installation
- Intensive training blocks
- Long pilot phase
- Iterative configuration
- Resource intensive validation

Our rapidLIVE approach

- Pre-installed and validated
- Ready-to-use / pre-configured
- Low fixed-cost pricing
- Go-Live in less than 2 months
- Includes Validation & Training materials
- Available onsite, hosted or SaaS

The Approach

rapidLIVE is a compelling and innovative way to simplify and accelerate the implementation of leading commercial Life Sciences systems.

Rather than the traditional method of working through each part of an application, assessing the different ways it can be used, and then selecting an approach for your organization; you can rely on our industry-leading experts to guide you on how best to use the different applications.

Using our experience gained through many implementations, we have developed a “best practices” method of using the applications. This allows us to provide tailored training, an effective user manual that contains detailed step-by-step instructions, and a proven validation package that requires **no** customization; all running over a pre-configured installation.

The Life Sciences Systems

rapidLIVE is currently available for the following products:

- **Oracle Clinical** - Clinical Data Management
- **Thesaurus Management System** - Medical Coding
- **Oracle Remote Data Capture** - Electronic Data Capture
- **Adverse Event Reporting System (AERS) & ARGUS** - Safety
- **Oracle Life Sciences Data Hub** - Clinical Data Warehouse

rapidLIVE is an affordable (fixed-price) accelerated deployment solution. It is a fully validated and ready-to-use package of a leading commercial Life Sciences system with its full functionality intact.

rapidLIVE enables small to medium-sized companies to go into production in the shortest possible time, in either an onsite or hosted implementation, while maintaining the highest quality standards. The final result is a ready-to-use production system to immediately support your core business needs.

Over 20 successful implementations in the last 3 years!

What is included in rapidLIVE?

Servers – Data Center-Ready Virtual Servers

For an onsite implementation, we provide you with pre-installed virtual servers. You choose if you want to run them on your own hardware or on a pharmaSOL provided standard hardware configuration. rapidLIVE is also available within our dedicated, world-class hosting center.

Three separate environments will be pre-installed:

Test – This environment will be used during the training phase and will be available later for your own testing and training purposes

Validation – This environment will be used to execute the User Acceptance Tests and for future Change Request Validation

Production – For productive use

Configuration

All software installed on the delivered hardware is preconfigured based upon current industry best practice, to best support the business processes relevant for each product.

Training

The modular training is designed to provide immediate hands-on usage of the system, based upon the specific configuration and workflow.

Validation – A Tailored Suite Based on GAMP5

Rather than obtaining a 3rd party validation suite or investing the time to create your own documents, rapidLIVE includes a validation suite integrated with the delivered installation, configuration, training and deployment.
