**rapidLIVE:
fast, efficient and
cost-effective
deployment of
Oracle Argus**

Fast-track your move to Oracle Argus

Optimized for PV teams

rapidLIVE for Oracle Argus is optimized for the unique demands of safety and clinical teams at organizations of all sizes, from biopharmaceutical and medtech companies to Contract Research Organizations (CROs).

Cencora PharmaLex rapidLIVE delivers a fully pre-configured Oracle Argus environment for life science companies. rapidLIVE is a simplified and cost-effective route to deploying one of the industry's leading global safety databases, with most of our customers going live with Argus within 8-10 weeks.

Hosted today for global pharmaceutical companies and CROs, rapidLIVE is particularly suited to small and mid-sized companies, with pre-built automations including workflows, validations, and expedited reporting rules helping to minimize the need for lengthy and iterative pilots to determine an optimal configuration.

Fast go-live lowers costs and optimizes time-to-value

Pre-configured solution reduces validation effort

Structured data migration means minimal downtime

rapidLIVE advantage

Our expert team are ready to deliver your business goals and optimally implement Argus rapidLIVE for your organization.

Globally proven

Successfully deployed in PV projects worldwide.

E2B R3-ready

Available for the latest version of Oracle Argus for E2B R2/R3 readiness.

Data security

Compliant with 21 CFR Part 11 and EU data privacy laws, as well as standards such as ISO 27001 for optimized data security.

Total flexibility: deploy your way

Software-as-a-service

Our SaaS package offers your own secure, dedicated tenant inside a controlled Oracle Argus environment.

Dedicated environments

Our dedicated test, validation and productions environments are available for deployment exclusively for your organization's sole use.

Both deployment modes include an industry best practice pre-configured, ready-to-use Argus environment, together with comprehensive training and a pre-executed validation package.

Structured data migration

Our services include data cleaning, data mapping and data migration, leveraging a range of approaches - from E2B and E2B+ to custom migration, depending on your specific needs.

Our expert "lift and shift" methodology is a proven solution for successfully moving customer data between data centers.

Minimize downtime

Our tried and tested methodology simplifies the transition process, helping reduce downtime.

rapidLIVE: accelerated safety database

Your safety database solution

For pressured PV departments, implementing a new safety database can seem like a daunting project, with potential concerns about the time, expense and complexity involved.

Offered as a discrete tenancy within our shared SaaS platform or as a dedicated environment for your organization's exclusive use, both deployment modes incorporate full training and a pre-executed validation package to accelerate go-live.

rapidLIVE can reduce this burden for PV teams of all sizes - delivering a fast and efficient way to deploy Oracle Argus Safety.

Our safety and technical teams can also support you with expert data cleaning, mapping and migration services, simplifying the process for your team.

rapidLIVE delivers:

- | | |
|---|---|
| Accelerated system deployment of leading safety database | ✓ |
| Fully pre-configured system following industry best practices | ✓ |
| Available as multi-tenant SaaS or in a dedicated environment | ✓ |
| Secure hosting managed by safety and technical experts | ✓ |
| Dedicated and comprehensive user training | ✓ |
| Administration and system configuration by expert team | ✓ |
| Validation support for your systems with dedicated QA team input | ✓ |
| Data cleaning, data mapping and data migration services | ✓ |
| Business consulting to align processes with regulatory compliance | ✓ |

Simplified validation

Our pre-configured deployment transforms the validation effort for your business. With our pre-validated SaaS environment, your team can simply review and approve the validation package and start work immediately. We can also provide validation support for your own systems, leveraging our functional and technical expertise - with input from our dedicated QA group as needed.

The result? A simplified process based on best practices that can reduce time and effort and increase your return on investment.

Customer success story: rapidLIVE transforms case processing efficiency for IntuVigilance

“rapidLIVE has improved our efficiency in case processing by miles”  IntuVigilance

Solution highlights

Pre-configured and ready-to-use, speeding time-to-go-live

Choice of pre-validated SaaS or dedicated environment

Deployed by pharmaceutical companies and CROs of all sizes

Structured data cleaning, data mapping and data migration

Customer challenge

As a business that offers case processing services, IntuVigilance had been using an off-the-shelf safety database. However, the team had a long-term ambition to implement Oracle Argus, and turned to rapidLIVE.

rapidLIVE solution

Cencora PharmaLex provided a strong, responsive team to support the rapidLIVE implementation. IntuVigilance benefited from a clear plan and schedule for what to expect at every stage. Thanks to PharmaLex experts, the IntuVigilance team was up and running with its brand-new system within four months – with all of its cases migrated and a robust training program in place.

“The entire process was extremely efficient and well project-managed on PharmaLex’s side, and we’ve been superbly supported by their team throughout.”

Nimisha Kotecha – Managing Director, IntuVigilance

Accelerate your route to a leading global safety database

rapidLIVE empowers your organization to deploy one of the leading global safety databases, Oracle Argus, quickly and efficiently. With a proven track record of success in projects around the world, rapidLIVE delivers a pre-configured and ready-to-go environment to get your team up and running with Argus fast and with minimal fuss.
